Sequence 49, Application US/08560098A

Patent No. 597641

GENERAL INFORMATION:
APPLICANT: WIEDLY Stephan
APPLICANT: HEINZEL-WIELAND, Regina
APPLICANT: STEFFENS, Gard Josef

TITLE OF INVENTION: Proteins having Fibrinolytic and
TITLE OF INVENTION: Coagulation-inhibiting Properties
NUMBER OF SEQUENCES: 60

L-plasminogen activator (EC 3.4.21.68) beta precursor - common vampire bat
N;Alternate names: tissue plasminogen activator
C;Species: Desmodus rotundus (common vampire bat)
C;Date: 31-Mar-1992 #sequence_revision 31-Mar-1992 #text_change 16-Jul-1999
C;Accession: 305059
R;Kxaetzschmar, J; Haendler, B.; Langer, G.; Boidol, W.; Bringmann, P.; Alagon, A.; D
Gene 105, 229-237, 1991
A;Ritle: The plasminogen activator family from the salivary gland of the vampire bat D

A;Title: Expression of human uterine tissue-type plasminogen activator in mouse cells a A;Reference number: 160110; MUID:88054470; PMID:2824147
A;Accession: 160110
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Cross-references: GB:M11890, NID:g339837, PIDN:AAAG1213.1; PID:g339839; Comment: Cleavage by plasmin or trypsin produces two chains held together by a single; Comment: t-PA converts plasminogen to plasmin by hydrolyzing a single Arg-Val bond. Icomment: t-PA binds chain A of fibrin by kringle 2 and the fibronectin type I repeat.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              A) Residues: 1562 (RES) Residues: 1562 (RES) Residues: 1562 (RES) Residues: 1582 (RES) RESIDER RES

plasmin (EC 3.4.21.7) precursor - sheep (fragments)
NiAlternate names: plasminogen
NiAlternate names: plasminogen
NiAlternate names: plasminogen
NiAlternate names: plasminogen
Cionation: miniplasminogen
Airtie: Structural aspects of the plasminogen of various species.
Airtie: Structural aspects of the plasminogen of various species.
Airtie: Structural aspects of the plasminogen of various species.
Airtie: protein B61545
Airtie: Molecule type: protein
Cionation: miniplasminogen
Cionation: miniplasminogen
Airtie: Complete amino acid sequence of ovine miniplasminogen.
Cionation: S28200; MUID: 93149995; PMID: 1492092
Airtie: Complete amino acid sequence of ovine miniplasminogen.

Eur. J. Blochem. 221, 939-949, 1994
A; Title: Solution structure of the epsilon-aminohexanoic acid complex of human plasminogen is converted to plasmin by plasminogen activators (see PIR:UKHU a A; Comment: Plasminogen is converted to plasmin by plasminogen activators (see PIR:UKHU a D; RIR: Reflucis)
C; Comment: Plasminogen is converted by alpha-2-antiplasmin (see PIR:ITHUA2) immediately af Fg-580, resulting in two chains connected by two disulfide bonds. Without the inhibitor,
```

```
C)Comment: Plasminogen is synthesized by the kidney and is present in plasma and many c C)Comment: Plasminogen is converted into plasmin by plasminogen activators, both plasminediately after dissociation from the old. In the presence of the inhibitor, the activation involves also removal of the activation peptide.

C;Comment: Stromelysin 1 (see PIR:KCMSS1) acts on plasminogen to produce angiostatin. 7

apolipoprotein(a) (EC 3.4.21.-) - rhesus macaque (fragment)
C.Species: Macaca mulatta (rhesus macaque)
C.Species: Macaca mulatta (rhesus macaque)
C.Date: 22-Nov-1989 #squence_revision 22-Nov-1989 #text_change 22-Jun-1999
C.Accession: A32869; A30848
R.Tomlinson, J.E.; McLean, J.W.; Lawn, R.M.
